

Module_26_Functional_Bank_(Advanced)

26-1 Module Overview And Project Setup

- Nothing new was discussed.

26-2 Get User Deposit And Set Deposit Total Value

- Discussed the previous module topic.

26-3 Update Deposit And Balance And Handle String Add

- Cover previous module details.

26-4 Money Withdraw And Reduce Balance For Withdraw

- Reviewed the previous module topics.

26-5 (Advanced) Common Function To Reduce Code Repeat

- We can keep the same task code into a function to avoid repeating.

26-6 (Advanced) Share One Function Between Two Input Field

- We can call a function within other multiple functions to perform a similar task. It maintains the DRY principle.

26-7 (Advanced) Deposit And Withdraw Update With One Function

- Updating Deposit and Withdraw are two different but similar tasks. Use a common function to perform these two task.

26-8 (Advanced) Shared Balance Update Function

- Use one function to update Deposit and Withdraw with total Balance.

26-9 (Advanced) Nested Function And Error Handling

- Handle unexpected input errors using if-else conditionals.
